

Table 1: Using of table-related structure elements

Structure Type	Description
Table	A two-dimensional layout of rectangular data cells, possibly having a complex substructure. It contains either one or more table rows (structure type TR) as children; or an optional table head (structure type THead) followed by one or more table body elements (structure type TBody) and an optional table footer (structure type TFoot). In addition, a table may have a caption (structure type Caption) as its first or last child.
TR	A row of headings or data in a table. It may contain table header cells and table data cells (structure types TH and TD).
TH	A table cell containing header text describing one or more rows or columns of the table.
TD	A table cell containing data that is part of the table's content.
THead, TBody, TFoot are also table structure type beginning from PDF 1.5.
